

Kama Precision Bandsaws

Welcome to the world of accuracy

MODEL 1525/A 1½" X 60" Kama Belt Sander, 115 Volt

Even though we have a lot of large, production quality belt and disc sanders in our line, we know that sometimes, you just need something smaller. But we don't believe that smaller should also mean poor quality and low power.

So, when we began to design a benchtop belt sander, we started with a full ¾ HORSEPOWER, Induction Motor. Then we built a heavy, 5/16" thick frame to hold the motor, pulleys and tension mechanism in exact relation to each other.

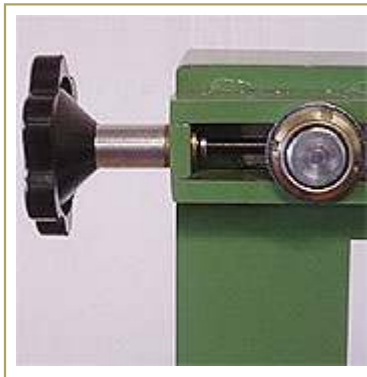

For versatility, there are 3 ways to sand and deburr with this machine:

- With the flat backing bar behind the sanding belt, providing a nice rigid platen
- With the curved backing bar which provides a surface for creating concave shapes
- With no backing bar, allowing the belt to flex and sand around rounded objects

The work table miters from horizontal to 45° and the gap between the plate throat and sanding belt is adjustable.

Precision mitering table

Belt tension adjustment

The KAMA 1525/A Belt Sander is a combination of big machine features, from it's heavy duty, precision balanced pulleys, to it's overbuilt frame and tracking device, to it's full ¾" horsepower motor. You can buy with confidence, knowing you are getting a piece of equipment that you'll be using in your shop for years to come, not wondering how long it will last you.
